

SAHIL KADBE

Java Full Stack Developer | Spring Boot | Angular | AWS | AI-Powered Applications
Pune, India | +91 9284295939 | kadbe.sahil@gmail.com | [linkedin.com/in/sahil-kadbe](https://www.linkedin.com/in/sahil-kadbe)

PROFESSIONAL SUMMARY

JAVA FULL STACK DEVELOPER WITH 5+ YEARS OF EXPERIENCE DESIGNING AND DELIVERING SCALABLE, SECURE ENTERPRISE APPLICATIONS USING JAVA 17, SPRING BOOT, MICROSERVICES, AND REST APIS, WITH STRONG FRONTEND DEVELOPMENT IN ANGULAR. HANDS-ON EXPERIENCE WITH AWS (EC2) CLOUD DEPLOYMENTS, POSTGRESQL, MYSQL, AND MONGODB. RECENTLY BUILT PRODUCTION AI-POWERED APPLICATIONS USING RETRIEVAL-AUGMENTED GENERATION (RAG), OPENAI APIS, LANGCHAIN, AND PGVECTOR FOR SEMANTIC SEARCH AND DOCUMENT INTELLIGENCE. SKILLED IN AGILE/SCRUM DELIVERY, CI/CD PRACTICES,

TECHNICAL SKILLS

LANGUAGES: JAVA (8/11/17), JAVASCRIPT, TYPESCRIPT, SQL

BACKEND: SPRING BOOT, SPRING MVC, SPRING DATA JPA, HIBERNATE, REST APIS, MICROSERVICES.

FRONTEND: ANGULAR, ANGULARJS, HTML5, CSS3, BOOTSTRAP

DATABASES: POSTGRESQL, MYSQL, PGVECTOR

CLOUD & DEVOPS: AWS (EC2), GIT, MAVEN, LINUX, CI/CD FUNDAMENTALS

AI & MODERN TECHNOLOGIES: RETRIEVAL-AUGMENTED GENERATION (RAG), OPENAI APIS, PGVECTOR

PROFESSIONAL EXPERIENCE

INFOSYS LIMITED *SENIOR ASSOCIATE CONSULTANT.*

JUL 2024 – PRESENT

- Designed and developed scalable microservices using Spring Boot and REST APIs, improving modularity and maintainability of client-facing services.
- Built responsive, high-performance Angular applications using lazy loading and OnPush change detection to improve page load speed and rendering efficiency.
- Integrated backend services with PostgreSQL via Spring Data JPA/Hibernate, optimizing queries to reduce average response latency.
- Collaborated in Agile sprints with cross-functional teams, consistently delivering features on schedule with minimal production defects.

Seligent Consulting Pvt. Ltd. *Java Full Stack Developer*

Nov 2023 – Jul 2024

- Developed Java-based adapters integrating Model-Based Systems Engineering (MBSE) tools via APIs, enabling seamless data exchange between heterogeneous systems.
- Built backend modules supporting system-level integrations, improving interoperability between previously siloed MBSE toolchains.
- Collaborated with engineering stakeholders to translate complex technical requirements into maintainable, well-tested Java components.

Tata Consultancy Services *Java Full Stack Developer*

Apr 2021 – Nov 2023

- Developed enterprise-grade applications using Spring Boot, Angular, and microservices architecture for enterprise clients across multiple project engagements.
 - Designed and consumed RESTful APIs enabling seamless frontend-backend communication, reducing integration friction between teams.
 - Deployed and maintained applications on AWS EC2, ensuring reliable availability for production workloads.
 - Improved database performance using Hibernate and optimized SQL queries, reducing average query execution time.
 - Participated in Agile development ceremonies, peer code reviews, and unit testing (JUnit/Mockito), strengthening overall code quality and test coverage.
-

FEATURED PROJECTS

NYAYSETU — AI-POWERED LEGAL ASSISTANCE PLATFORM

SPRING BOOT 3.2 · JAVA 17 · MYSQL · AWS S3 · WHATSAPP CLOUD API · PYTHON-BASED AI MICROSERVICE

- Architected a citizen-facing legal AI platform supporting Hindi, English, and Marathi for property, consumer, and family law use cases, accessible via WhatsApp.
- Designed and built the core backend as a modular monolith using Spring Boot 3.2, Java 17, and MySQL with Flyway-managed schema migrations.
- Directed the design of a separate AI microservice (Python/FastAPI, LangChain) for document retrieval, defining the API contracts, hybrid cost model, and integration points with the Java backend.
- Engineered template-first legal document generation to ensure legal accuracy and consistency, integrated with AWS S3 (Mumbai region) for secure document storage.
- Specified voice-transcription integration (Groq Whisper) to enable accessible, voice-driven legal queries for non-technical users.

EnsureThem — AI-Powered Insurance Advisory Platform

Spring Boot · Java · PostgreSQL · PGVector · Angular · OpenAI APIs · AWS EC2

- Built a full-stack insurance advisory platform with policy PDF ingestion, multi-step onboarding, and an admin control panel, deployed on AWS EC2.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline using PostgreSQL with PGVector for AI-powered policy Q&A and natural-language document search.
- Integrated OpenAI APIs for contextual question-answering over insurance policy documents, including an off-topic guardrail system to keep responses scoped and reliable.
- Developed the backend with Spring Boot and the frontend with Angular, containerizing core services for consistent deployment.

RAG-Based Document AI System

Java · OpenAI Embeddings · Vector Search · PDF Processing

- Built a Retrieval-Augmented Generation (RAG) system using vector embeddings and semantic search to enable contextual, AI-based responses over PDF documents.
- Integrated OpenAI embeddings and optimized document chunking and retrieval strategies to improve search accuracy and response relevance.
- Applied vector database concepts to enhance retrieval precision, forming the technical foundation later extended into the EnsureThem RAG pipeline.

EDUCATION

B.E. IN ELECTRONICS & TELECOMMUNICATION ENGINEERING — RTMNU, NAGPUR

2020
