Professional Summary

Full Stack Java Developer with 5+ years of experience building scalable, secure web applications using Java, Spring Boot, and Angular. Strong expertise in REST API development, microservices architecture, and performance optimization. Recently worked on AI-driven systems including Retrieval-Augmented Generation (RAG) and Spring AI. Basic hands-on exposure to AWS and cloud-based deployments.

Technical Skills

- **Languages:** Java, JavaScript
- **Frameworks:** Spring Boot, Spring MVC, Hibernate, Angular, AngularJS
- **Backend:** REST APIs, Microservices, Spring Security, JWT Authentication
- **Databases:** PostgreSQL, MongoDB, MySQL
- **Tools:** Git, Maven, JUnit, Mockito
- **Concepts:** Design Patterns, Multithreading, System Design Basics
- **Cloud:** AWS (EC2, basic deployment, fundamentals)

Experience

INFOSYS LIMITED

Jul 2024 – Present

Senior Associate

- Designed and developed scalable microservices using Spring Boot and REST APIs.
- Implemented secure authentication using Spring Security and JWT.
- Built responsive Angular applications with optimized performance (lazy loading, OnPush).
- Integrated backend services with PostgreSQL using JPA/Hibernate.
- Improved application performance and reduced response latency through optimized queries.

SELIGENT CONSULTING PVT. LTD.

Nov 2023 – Jul 2024

Java Full Stack Developer

- Developed Java-based adapters integrating MBSE tools via APIs.
- Built backend modules and explored system-level integrations.

TATA CONSULTANCY SERVICES

Apr 2021 – Nov 2023

Java Full Stack Developer

- Developed enterprise applications using Spring Boot, Angular, and microservices architecture.
- Designed and consumed RESTful APIs enabling seamless frontend-backend communication.
- Deployed applications on AWS (EC2) ensuring availability and reliability.
- Improved database performance using Hibernate and optimized queries.
- Participated in Agile development, code reviews, and unit testing.

Projects

RAG-based Document AI System

- Built a Retrieval-Augmented Generation (RAG) system using vector embeddings and semantic search.
- Processed documents (PDFs) and enabled contextual AI-based responses.
- Integrated OpenAI embeddings and optimized chunking and retrieval strategies.
- Used vector database concepts to enhance search accuracy and response relevance.
